PREFACE

This report provides background information on the demographic and labour market characteristics of Local Board areas to assist persons at the community level establish Local Boards and develop environmental scans and strategic plans.

The data sources used in preparing Local Board area profiles are Statistics Canada's Census and administrative data bases associated with federal and provincial government programs. These profiles provide a basis for assessing the composition of a Local Board area's population and labour force and the structure of its labour market.

Those responsible for preparing environmental scans, however, should be aware that it will be necessary to supplement these profiles by gathering information on current developments in the local area economy and labour market, and on issues facing firms, workers, designated groups and those entering or re-entering the labour market. To acquire the necessary additional information, networks and partnerships should be formed to develop a local area labour market information base of value to all interested parties in the community.

This document on the demographic and labour market characteristics of Local Board areas was prepared under the direction of the Federal-Provincial Labour Market Information Committee. The contributions of the Economic Analysis and Information Directorate, Human Resources Development Canada, Ontario Region, and the Ontario Training and Adjustment Board's Economics and Labour Market Research Group are gratefully acknowledged.

INTRODUCTION

The objective of this report is to assist persons involved in establishing Local Boards by providing baseline or benchmark statistics on the composition of the population and labour force, and data on longer-term shifts in the industrial and occupational employment mix within Local Board areas.

Following this Introduction, a set of tables is presented that cover the following aspects of Local Board areas:

- Characteristics of the labour force source population (persons 15 years of age and over), persons in the labour force, and persons not participating in the labour force.
- Population statistics for selected designated groups (Aboriginal peoples, francophones, people with disabilities, racial minorities, and women);
- Size of the labour force, numbers employed and unemployed;
- Selected designated groups within the labour force;
- Employment by industry and by occupation;
- Trends in employment across industries and occupations;
- Unemployment Insurance claimants by occupation of last job;
- Social assistance recipients by reason for receiving social assistance.

One of the principal data sources used in compiling the information for each Local Board area has been Statistics Canada's Decennial Census (both 1991 and 1981). The second source is administrative data associated with federal and provincial government programs.

Given the reliance on these sources, especially the Decennial Census, the statistics on Local Board areas presented in this report are of value for providing an understanding of the composition of the population and labour force and the structure of the labour market. From standard statistical sources, it is not possible to compile information on the most recent developments and the current situation in each Local Board area's economy and labour market.

This constraint exists because surveys undertaken by Statistics Canada that provide up to date labour market information (labour force, employment by industry and occupation, unemployment, hours of work, earnings, etc.) are based on samples of either households or firms that are designed to produce statistics at the national and

provincial levels. The samples are not large enough to permit the production of reliable statistics for most subprovincial areas.

The statistical profiles presented in this report should be viewed as a starting point. As a Local Board develops its strategic plan, it will be necessary to supplement the profiles compiling additional and more current data to assess labour force development issues.

It is also important to note that there were a number of limitations on the availability of information at the time this report was prepared (summer, 1994). For francophones, information was not available for persons in the labour force and those not in the labour force by level of educational attainment. When these data are available they will be distributed to Local Boards.

For people with disabilities, statistics on their population and labour force characteristics have been taken from Statistics Canada's Health and Activity Limitation Survey. From this survey, reliable data are available only for Ontario and ten Census Metropolitan Areas within the province.

Only a limited amount of information is available on the demographic and labour force characteristics of Aboriginal peoples. There was a major underenumeration of Aboriginal peoples in the 1991 Decennial Census, especially for those residing in First Nations Communities on reserves, which is a significant proportion of the total Aboriginal peoples population. In this report estimates of the working age population (persons 15 years of age and over) are presented to provide one measure of the magnitude of this group in a Local Board area. These estimates have been developed through using data from both administrative records and the 1991 Census.

The Aboriginal peoples are developing an Aboriginal Labour Force Development Strategy to be implemented through 15 Native Local Area Management Boards. Where appropriate, these Boards and the Local Boards may wish to consider cooperative initiatives to close the gaps in the information available on Aboriginal peoples.

The next section of this report contains tables that provide information by Local Board area. Provincial totals or averages are also shown. With this format it is possible to make comparisons across Local Board areas or with the province.

The final section consists of a Technical Note on the concepts and definitions underlying the statistics presented in the tables. For example, incorporated into the Technical Note are definitions for labour force, unemployment, designated groups and unemployment insurance claimants. Only summary definitions on the main terms and measures are provided. Detailed definitions on concepts and measures, sources of labour market information, and related topics will be made available to Local Boards in a separate publication titled Labour Market Information Handbook.

DEMOGRAPHIC AND LABOUR MARKET CHARACTERISTICS

This section contains 23 tables on the population and labour market characteristics of Local Board areas. The information is of value for analyzing and assessing the composition of a Local Board area's population and labour force with respect to age, gender, and designated groups (Aboriginal peoples, francophones, people with disabilities, racial/visible minorities, and women). As well, insights into the structure of the job market can be obtained from the statistics on employment by industry and by occupation, and changes in employment across industries and occupations between 1981 and 1991.

In addition, the data can assist in identifying potential issues on the supply side of the labour market. For example, unemployment insurance claimants by occupation of last job and statistics on the number of persons receiving social assistance because of unemployment are useful in assessing the extent to which there may be long-term unemployment problems within a Local Board area.

In the tables information is provided for each of the 25 Local Board areas and totals or averages for Ontario are also included. With this format it is possible to make comparisons across Local Board areas and with the province on selected population and labour market characteristics.

The 23 tables included in this section are listed below.

Table

1. Population 15 Years of Age and Over by Age, Sex and Local Board Area, June 1991.
2. Population 15 Years of Age and Over by Educational Attainment, Sex and Local Board Area, June 1991.
3. Labour Force by Age, Sex and Local Board Area, June 1991.
4. Labour Force by Educational Attainment, Sex and Local Board Area, June 1991.
5. Labour Force Activity of the Population 15 Years of Age and Over by Sex and Local Board Area, June 1991.
6. Persons Not in the Labour Force by Educational Attainment, Sex and Local Board Area, June 1991.
7. Employment by Industry Sector and Local Board Area, June 1991.

8. Percent Changes in Employment by Industry Sector and Local Board Area, 1981-1991.
9. Employment by Occupation and Local Board Area, June 1991.
10. Percent Changes in Employment by Occupation, Sex and Local Board Area, 1981-1991.
11. Francophone Population 15 Years of Age and Over by Educational Attainment, Sex and Local Board Area, June 1991.
12. Labour Force Activity of the Francophone Population 15 Years of Age and Over by Sex and Local Board Area, June 1991.
13. Racial Minority Population 15 Years of Age and Over by Educational Attainment, Sex and Local Board Area, June 1991.
14. Racial Minority Population 15 Years of Age and Over in the Labour Force by Educational Attainment, Sex and Local Board Area, June 1991.
15. Racial Minority Population 15 Years of Age and Over Not in the Labour Force by Educational Attainment, Sex and Local Board Area, June 1991.
16. Labour Force Activity of the Racial Minority Population 15 Years of Age and Over by Sex and Local Board Area, June 1991.
17. Aboriginal Peoples 15 Years of Age and Over by Sex and Local Board Area, 1991.
18. People with Disabilities Aged 15 to 64 by Educational Attainment and Sex for Ontario and Ten Metropolitan Areas, 1991.
19. Labour Force Activity of People with Disabilities Aged 15 to 64 by Sex for Ontario and Ten Metropolitan Areas, 1991.
20. Unemployment Insurance Claimants by Occupation and Local Board Area, June 1993 and June 1994.
21. Family Benefits and General Welfare Assistance Caseloads by Local Board Area, December 1992 and December 1993.
22. Family Benefits Caseload by Reason for Assistance and Local Board Area, December 1993.
23. General Welfare Assistance Caseload by Reason for Assistance and Local Board Area, December 1993.

TECHNICAL NOTE

In this Technical Note definitions underlying the terms and measures used in the statistical tables are provided. While these terms are presented in alphabetical order, in some cases the components of terms such as labour force activity or employment equity groups are described under the main entry. Only summary definitions on the main terms and measures are provided below.

Designated Groups

The term designated groups in this publication covers those identified by the Governments of Canada and Ontario under employment equity legislation (Aboriginal peoples, visible/racial minorities, people with disabilities and women), and francophones. In each case the population is defined as persons 15 years of age and over.

Aboriginal peoples: This population group includes members of the Indian, Inuit and Metis peoples living on or off reserves.

Francophones: Persons are identified as francophones based on responses to the "mother tongue" question in the 1991 Census. Persons reporting French; French and English; French, English and other; and French and other mother tongue make up the total francophone population.

People with Disabilities: Persons in this group include those with a persistent physical, mental, psychiatric, sensory or learning impairment that they believe, or perceive an employer is likely to believe, disadvantages their employment prospects.

Visible/Racial minorities: Persons in this group include those who are "non-Caucasian in race or non-white in colour". Since there were no questions in the 1991 Census on race or colour and no questions which specifically asked individuals if they belong to a visible minority group, indirect means were used to determine whether persons are or are likely to be in a visible/racial minority group. These included responses to the ethnic origin question, country of birth question, mother tongue question and screening of a residual category of the ethnic origin variable.

Educational Attainment Levels

Educational attainment refers to the highest grade or year of elementary or secondary school attended. For college, university or other post-secondary education and formal vocational training programs, educational attainment is defined in terms of year completed.

Industrial Classification

The industry categories used in the statistical tables are based on Statistics Canada's Standard Industrial Classification. Workers are classified to an industry category based on the general nature of the business carried out in the establishment where the person worked as indicated by the name of the employer and the kind of business, industry or service. Both the 1980 and 1970 versions of the Standard Industrial Classification underlie the statistical tables in this document. The 1980 Classification was applied for the employment by industry data shown for 1991. For the table that shows industrial employment for 1981 and 1991, it was necessary to use the 1970 Classification.

Labour Force Activity

The labour force activity of the working age population (persons 15 years of age and over) refers to persons who were participating in the labour force and were either employed or unemployed as of a specific reference week period. For 1991 Census data, the reference period for measuring labour force activity is the week before June 4, 1991. The working age population excludes institutional residents but include people in the armed services.

Labour force: Persons who were either employed or unemployed during the reference week.

Labour force participation rate: The total labour force in the reference week expressed as a percentage of the population 15 years of age and over (excluding institutional residents). The participation rate for a particular group is persons in the group who are in the labour force as a percentage of the total population in that group.

Employed: Refers to persons who worked at any time during the reference week as a paid worker or self-employed. Employed also includes those who were absent from their jobs or businesses because of temporary illness or disability, vacation, labour dispute at their place of work or were absent for other reasons. In the Census, employed includes people in the armed forces.

Unemployed: The unemployed include people who during the reference week were:

- a) available for work and had actively looked for work in the past four weeks;
- b) on layoff and expected to be recalled to their job;

- c) had definite arrangements to start a new job in four weeks or less.

Unemployment rate: Persons unemployed expressed as a percentage of the total labour force. For a specific group of workers, the unemployment rate is the number unemployed expressed as a percentage of those in the group who are in the labour force.

Not in the labour force: This category includes persons who in the reference week were neither working nor looking for work. Included also are those who looked for work during the previous four weeks but were not available to start work in the reference week.

Occupational Classification

The occupational categories shown in the statistical tables are based on either Human Resource Development Canada's National Occupational Classification (NOC) or Statistics Canada's Standard Occupational Classification. With the NOC, jobs are classified to an occupational category on the basis of job skill level and skill type. The NOC underlies the occupational employment data presented for 1991.

For the table that shows changes in occupational employment between 1981 and 1991, it was necessary to use the Standard Occupational Classification. With this classification system jobs are assigned to an occupational category on the basis of main duties or skill type.

Social Assistance Caseloads

The statistical tables on social assistance caseloads cover those who were receiving assistance under either the Family Benefits Act or General Welfare Assistance Act. Ontario administers the Family Benefits program that provides longer term assistance based on a special need such as age, disability, sole support parent, vocational rehabilitation services, handicapped, foster, and chronic care.

Municipalities administer the General Welfare Assistance program that provides short-term assistance based on various needs such as unemployed, health problems, student, aged, emergency and other.

Unemployment Insurance Claimants

Unemployment insurance claimants are persons claiming benefits on the last working day of the month indicated. The claimant statistics used in this report include those who may not have been in receipt of benefits for various reasons (e.g. mandatory waiting period, incomplete claim information) but exclude persons on maternity, illness, training, job creation and work-sharing claims.

Prestataires d'assurance-chômage

Les prestataires d'assurance-chômage sont des personnes qui réclament des prestations à partir du dernier jour de travail du mois indiqué. Les statistiques sur les prestataires utilisées dans ce rapport couvrent les personnes qui n'ont peut-être pas reçu de prestations pour différentes raisons (par exemple: période d'attente obligatoire, renseignements incomplets), mais pas les personnes en congés de maternité, de maladie, d'études, demandes dans le cadre d'un programme de création d'emploi ou de travail partagé.

d'âge actif exclut les personnes en institutions, mais inclut les personnes dans les Forces armées.

Chômeurs : les chômeurs comprennent les personnes qui, au cours de la semaine de référence :

a) étaient aptes au travail et cherchaient activement du travail pendant les quatre semaines précédentes;

b) étaient en mise à pied et s'attendaient d'être rappelées au travail;

c) avaient une entente ferme pour commencer un nouveau travail dans quatre semaines ou moins.

Personnes employées : désignent les personnes qui travaillaient à n'importe quel moment au cours de la semaine de référence, contre rémunération ou pour leur propre compte. Les personnes employées comprennent également celles qui étaient absentes de leur emploi ou de leur entreprise en raison de maladie ou d'incapacité temporaire, de vacances, de conflit de travail dans l'entreprise où elles étaient embauchées, ou absentes pour d'autres raisons. Dans le recensement, les personnes employées comprennent les personnes faisant partie des Forces armées.

Personnes inactives : cette catégorie comprend les personnes qui, au cours de la semaine de référence, ne travaillaient pas et ne cherchaient pas d'emploi. Elle comprend également les personnes qui cherchaient du travail au cours des quatre semaines précédentes, mais qui n'étaient pas aptes à commencer un travail pendant la semaine de référence.

Population active : personnes qui avaient un emploi ou qui étaient au chômage pendant la semaine de référence.

Taux de participation à la population active : l'ensemble de la population active pendant la semaine de référence exprimé en tant que pourcentage de la population pour un groupe particulier équivalant au nombre de personnes dans le groupe qui font partie de la population active exprimé en tant que pourcentage de la population totale du groupe.

Taux de chômage : les personnes en chômage exprimées en tant que pourcentage de l'ensemble de la population active. Pour un groupe particulier de travailleurs, le taux de chômage équivaut au nombre de chômeurs exprimé en tant que pourcentage des personnes composant le groupe et faisant partie de la population active.

Francophones : les personnes ont été identifiées comme francophones d'après leurs réponses à la question sur « la langue maternelle » lors du recensement de 1991. Les personnes qui ont répondu que leur langue maternelle était le français, le français et l'anglais, le français, l'anglais et une autre langue, et le français et une autre langue maternelle, composent la population francophone.

Minorités raciales/visibles : les personnes de ce groupe comprennent celles qui « ne sont pas de race blanche ou qui n'ont pas la peau blanche ». Comme le questionnaire du recensement de 1991, ne comportait aucune question sur la race ou la couleur de la peau, ni si elles appartenaient à une minorité visible, on a eu recours à des moyens indirects pour déterminer si les personnes faisaient partie ou étaient susceptibles de faire partie d'une minorité raciale/visible. Ces moyens comprenaient les réponses aux questions sur l'origine ethnique, le pays d'origine, la langue maternelle et l'analyse d'une catégorie résiduelle de la variable de l'origine ethnique.

Peuples autochtones : ce groupe comprend les membres des peuples indiens, inuits et métis qui vivent dans les réserves ou en dehors.

Personnes handicapées : les personnes de ce groupe comprennent celles qui ont un handicap persistant d'ordre physique, mental, psychiatrique, sensoriel ou une difficulté d'apprentissage qu'elles considèrent, ou qu'elles croient qu'un employeur serait susceptible de considérer, comme minimisant leurs chances d'emploi.

Niveaux d'instruction

Le niveau d'instruction désigne le grade le plus haut ou la dernière année d'études élémentaires ou secondaires. En ce qui concerne les études collégiales, universitaires ou autres études postsecondaires et programmes de formation professionnelle reconnus, le niveau d'instruction se définit par le nombre d'années complétées.

Nombre de bénéficiaires de l'aide sociale

Les tableaux statistiques sur le nombre de bénéficiaires de l'aide sociale couvrent les personnes qui recevaient cette aide en vertu de la Loi sur les prestations familiales ou de la Loi sur l'aide sociale générale. L'Ontario administre le programme des prestations familiales qui offre une aide à long terme en fonction d'un besoin spécial comme l'âge, l'incapacité, une situation où un seul parent est le soutien de famille, des services de réadaptation professionnelle, un handicap, un enfant en foyer ou des soins aux malades chroniques.

Participation à la population active

La participation de la population d'âge actif à la population active (personnes de 15 ans et plus) se rapporte aux personnes qui ont participé à la population active et qui étaient soit employées ou en chômage au cours d'une période de référence donnée d'une semaine. Aux fins des données du recensement de 1991, la période de référence pour mesurer la participation à la population active est la semaine précédant le 4 juin 1991. La population

Cette note technique contient les définitions des termes et des mesures utilisés dans les tableaux statistiques. Bien que ces termes soient présentés par ordre alphabétique, il arrive que certains de leurs composants comme « participation à la population active » ou « groupes visés par l'équité » soient décrits sous le terme principal. Seules des définitions sommaires des principaux termes et des principales mesures sont données ci-après.

Classification des industries

Les catégories d'industries utilisées dans les tableaux statistiques sont basées sur la Classification type des industries de Statistique Canada. Les travailleurs sont classés dans une catégorie d'industries d'après la nature générale de l'activité de l'entreprise où la personne a travaillé, tel que l'indique le nom de l'employeur et le type d'entreprise, d'industrie ou de service. Les tableaux statistiques compris dans ce document s'appuient sur les versions de 1980 et de 1970 de la Classification type des industries. La Classification de 1980 a été appliquée pour les données sur l'emploi selon le secteur industriel pour 1991. Quant au tableau des données sur l'emploi selon le secteur industriel pour 1981 et 1991, on a dû employer la classification de 1970.

Classification des professions

Les catégories professionnelles figurant dans les tableaux statistiques s'appuient sur la Classification nationale des professions (CNP) de Développement des ressources humaines Canada et sur la Classification type des professions de Statistique Canada. Dans la CNP, les emplois sont classés dans une catégorie professionnelle selon le niveau et le type de compétences requis pour l'emploi. Les données sur l'emploi selon la profession pour 1991 sont classées en fonction de la CNP.

Pour le tableau qui identifie les variations de l'emploi selon la profession entre 1981 et 1991, on a utilisé la Classification type des professions. Dans ce système de classification, les emplois sont mis dans une catégorie professionnelle en fonction des principales tâches ou du type de compétences.

Groupes désignés

Le terme « groupes désignés », utilisé dans cette publication, englobe les groupes identifiés par les gouvernements du Canada et de l'Ontario dans les lois sur l'équité en matière d'emploi (peuples autochtones, minorités raciales/visibles, personnes handicapées et femmes), et les francophones. Dans chaque cas, la population est définie en tant que personnes de 15 ans et plus.

Tableau 23. Nombre de bénéficiaires d'aide sociale générale, selon la raison et la région, décembre 1993

| Région | Total | Raison | | | | | | |

10. Variations en pourcentage de l'emploi selon la profession et la région, 1981-1991.
11. Population francophone de 15 ans et plus selon le niveau d'instruction, le sexe et la région, juin 1991.
12. Participation de la population francophone de 15 ans et plus à la population active, selon le sexe et la région, juin 1991.
13. Population des minorités raciales de 15 ans et plus, selon le niveau d'instruction, le sexe et la région, juin 1991.
14. Population des minorités raciales de 15 ans et plus composant la population active, selon le niveau d'instruction, le sexe et la région, juin 1991.
15. Population inactive des minorités raciales de 15 ans et plus, selon le niveau d'instruction, le sexe et la région, juin 1991.
16. Participation de la population des minorités raciales de 15 ans et plus à la population active, selon le sexe et la région, juin 1991.
17. Population autochtone de 15 ans et plus selon le sexe et la région, juin 1991.
18. Personnes handicapées de 15 à 64 ans, selon le niveau d'instruction et le sexe, pour l'Ontario et les dix régions métropolitaines, 1991.
19. Participation des personnes handicapées de 15 à 64 ans, selon le sexe, pour l'Ontario et les dix régions métropolitaines, 1991.
20. Nombre de prestataires d'assurance-chômage selon la profession et la région, juin 1993 et juin 1994.
21. Nombre de bénéficiaires de prestations familiales et de l'aide sociale générale selon la région, décembre 1992 et décembre 1993.
22. Nombre de bénéficiaires de prestations familiales selon la raison et la région, décembre 1993.
23. Nombre de bénéficiaires de l'aide sociale générale selon la raison et la région, décembre 1993.

CARACTÉRISTIQUES DE LA DÉMOGRAPHIE ET DU MARCHÉ DU TRAVAIL

Cette partie comporte 23 tableaux sur les caractéristiques de la population et du marché du travail des régions des commissions locales. Ces renseignements seront très utiles pour analyser et évaluer la composition de la population et de la population active des régions des commissions locales selon l'âge, le sexe et les groupes désignés (peuples autochtones, francophones, personnes handicapées, minorités raciales/visibles et femmes). En outre, on peut se faire une idée de la structure du marché du travail à partir des statistiques sur l'emploi selon le secteur industriel et la profession et sur les variations de l'emploi selon les secteurs industriels et les professions entre 1981 et 1991.

De plus, les données peuvent aider à identifier certains problèmes éventuels du côté de l'offre sur le marché du travail. Par exemple, les statistiques sur les prestataires d'assurance-chômage selon leur dernier emploi et sur le nombre de bénéficiaires de l'aide sociale en raison de chômage sont utiles pour évaluer la mesure dans laquelle une région desservie par une commission locale subira les effets possibles du chômage à long terme. Les tableaux contiennent des données sur chacune des 25 régions des commissions locales, ainsi que des totaux et des moyennes pour l'Ontario. Il est ainsi possible de faire des comparaisons entre les régions des commissions locales et avec la province selon les caractéristiques prédéterminées de la démographie et du marché du travail.

Voici la liste des 23 tableaux compris dans ce rapport.

Tableau

1. Population de 15 ans et plus selon l'âge, le sexe et la région, juin 1991.
2. Population de 15 ans et plus selon le niveau d'instruction, le sexe et la région, juin 1991.
3. Population active selon l'âge, le sexe et la région, juin 1991.
4. Population active selon le niveau d'instruction, le sexe et la région, juin 1991.
5. Participation de la population de 15 ans et plus à la population active, selon le sexe et la région, juin 1991.
6. Personnes inactives selon le niveau d'instruction, le sexe et la région, juin 1991.
7. Emploi selon le secteur industriel et la région, juin 1991.
8. Variations en pourcentage de l'emploi selon le secteur industriel, le sexe et la région, 1981-1991.
9. Emploi selon la profession et la région, juin 1991.

permettre la production de statistiques fiables pour la plupart des régions intraprovinciales.

Les profils statistiques inclus dans ce rapport ne devraient servir que de point de départ. Au fur et à mesure qu'une commission locale élaborera son plan stratégique, il lui sera nécessaire de compléter ces profils avec des données supplémentaires plus récentes qui lui permettront d'évaluer les questions touchant à la mise en valeur de la main-d'œuvre.

Il importe également de noter que certaines informations n'étaient pas disponibles au moment de la préparation du présent rapport (été 1994). En ce qui concerne les francophones, il n'a pas été possible d'obtenir des informations sur les personnes composant la population active et les personnes inactives selon le niveau d'instruction. Ces renseignements seront transmis aux commissions locales aussitôt qu'ils seront disponibles.

En ce qui concerne les personnes handicapées, les statistiques sur leur population et les caractéristiques de la population active proviennent de l'Enquête sur la santé et les limitations d'activité menée par Statistique Canada. Ce sondage ne fournit des données fiables que pour l'Ontario et les régions métropolitaines de recensement de la province.

Il n'y a qu'une certaine quantité de renseignements disponibles sur les caractéristiques de la démographie et de la population active des peuples autochtones. La population autochtone a été largement sous-représentée dans le recensement décennal de 1991, en particulier celle des peuples des communautés des Premières Nations qui vivent sur les réserves et qui constituent une proportion importante de la population autochtone totale. Dans ce rapport, les estimations de la population en âge de travailler (personnes de 15 ans et plus) sont fournies afin de donner une idée de l'importance de ce groupe dans les régions des commissions locales. Ces estimations ont été produites à l'aide de données administratives et de recensement de 1991.

Les peuples autochtones élaborent à l'heure actuelle une stratégie de mise en valeur de la main-d'œuvre autochtone qui sera mise en application par l'entremise de quinze conseils régionaux autochtones de gestion. Au besoin, il se peut que ces conseils et les commissions désirent étudier la possibilité d'entreprendre des initiatives communes visant à éliminer les lacunes concernant les renseignements disponibles sur les peuples autochtones.

La deuxième partie de ce rapport se compose de tableaux de renseignements détaillés en fonction des régions des commissions locales. Ceux-ci indiquent également des totaux et des moyennes pour la province. Il est ainsi possible de faire des comparaisons entre les régions des commissions locales ou avec la province.

La dernière partie comporte une note technique sur les concepts et définitions sur lesquels s'appuient les statistiques contenues dans ces tableaux. Par exemple, la note technique donne des définitions de la population active, du chômage, des groupes désignés et des prestataires d'assurance-chômage. La note ne comprend que des définitions sommaires des principaux termes et mesures. Une publication intitulée Guide d'information sur le marché du travail², qui renfermera des définitions des concepts et des mesures, ainsi que des sources d'information sur le marché du travail et sur des sujets connexes, sera mise à la disposition des commissions locales.

INTRODUCTION

Ce rapport a pour objectif d'aider les personnes qui participent à l'établissement des commissions locales en leur fournissant des données fondamentales ou de référence sur la composition de la population et de la population active, ainsi que sur les variations à moyen terme de l'emploi dans les diverses professions et branches d'activité dans les régions des commissions locales.

Cette introduction est complétée d'un ensemble de tableaux portant sur les aspects suivants des régions des commissions locales :

- Caractéristiques de la population-source composant la population active (personnes de 15 ans et plus), les personnes composant la population active et les personnes inactives.
- Statistiques sur la population des groupes désignés (peuples autochtones, francophones, personnes handicapées, minorités raciales et femmes);
- Nombre de personnes composant la population active : personnes employées et chômeurs;
- Groupes désignés faisant partie de la population active;
- Emploi par secteur industriel et profession;
- Tendances de l'emploi dans tous les secteurs industriels et toutes les professions;
- Prestataires d'assurance-chômage selon leur dernier emploi;
- Bénéficiaires de l'aide sociale selon la raison.

Le recensement décennal de Statistique Canada (1991 et 1981) a été l'une des principales sources de données utilisées pour la compilation des informations sur les régions des commissions locales. Comme deuxième source, on a eu recours aux données administratives en rapport avec les programmes des gouvernements fédéral et provincial.

Étant donné la fiabilité de ces sources, en particulier du recensement décennal, les statistiques sur les régions des commissions locales présentées dans ce rapport sont importantes pour comprendre la composition de la population et de la population active, ainsi que de la structure du marché du travail. Il n'est pas possible de recueillir des renseignements sur les activités les plus récentes et la situation actuelle de l'économie et du marché du travail de chacune des régions des commissions locales, à partir des sources statistiques régulières.

Cette contrainte résulte du fait que les sondages menés par Statistique Canada, visant à recueillir de l'information à jour sur le marché du travail (population active, emploi selon le secteur industriel et la profession, chômage, heures de travail, gains, etc.), s'appuient sur des échantillons de ménages ou d'entreprises conçus pour produire des statistiques à l'échelle nationale et provinciale. Les échantillons ne sont pas suffisamment importants pour

Ce rapport comporte des renseignements généraux sur les caractéristiques de la démographie et du marché du travail des régions locales pour aider les personnes responsables, à l'échelle communautaire, à établir les commissions locales, de faire des analyses environnementales et de préparer des plans stratégiques.

Les bases de données administratives et de recensement en rapport avec les programmes des gouvernements fédéral et provincial sont les sources de données qui ont été utilisées pour la préparation des profils des régions des commissions locales. Ces profils fournissent une base à l'évaluation de la composition de la population et de la population active des régions et de la structure de leur marché du travail.

Les responsables des analyses environnementales doivent savoir qu'il leur faudra compléter ces profils par des renseignements à jour sur l'économie et le marché du travail de la région locale ainsi que sur les questions touchant les entreprises, les travailleurs et travailleuses, les groupes désignés et les personnes qui entrent sur le marché du travail ou le réintègrent. Pour recueillir les renseignements additionnels nécessaires, il faudrait former des réseaux et des partenariats en vue de mettre sur pied une base de données sur le marché du travail de la région locale, utile à tous les intéressés de la communauté.

Ce document sur les caractéristiques de la démographie et du marché du travail des régions des commissions locales a été préparé sous la direction du Comité fédéral-provincial sur l'information sur le marché du travail. La Direction de l'information, des analyses et de l'économie de Développement des ressources humaines Canada, région de l'Ontario, et le Groupe de recherche économique et d'analyse du marché du travail du Conseil ontarien de formation et d'adaptation de la main-d'œuvre méritent une reconnaissance particulière pour leur contribution.
